

ACI Flatwork Finisher Certification

Differentiate yourself from your competition and prove your craftsmanship by becoming American Concrete Institute (ACI) Certified. This is a thorough refresher course in good concrete practices.

Individuals with three or more years of verifiable experience are eligible for ACI Flatwork Finisher Certification. All others qualify for ACI Work Technician Certification.

The ACI Test is administered at the second session of the two-day course. The 1-week period between classes allows time for thorough review of the course material prior to taking the test and to gather work experience documentation.

The two-session course covers

- Basic concrete technology
- Materials and mix proportioning
- Quality control testing
- Placing and finishing tools
- Instructions for placing, finishing and jointing slabs on grade
- Curing and protection of concrete
- Solutions for commonly asked questions and problems
